COMPOSIO_SEARCH_TOOLS

fetch slack messages and summarize 3 found

SLACK_FETCH_MESSAGES MATCH
Fetch messages from a Slack channel

SLACK_LIST_CHANNELS MATCH
List all channels in a workspace

SLACK_GET_THREAD
Get replies in a message thread

PLAN
1 List all channels
2 Fetch messages from last 48h
3 Classify and summarize in sandbox

WARNINGS
! Large output auto-saved to file if >40k chars
! Rate limit: 50 req/min

■ WHY COMPOSIO

Your agents are smart. Their tools should be too.

01 SMART TOOLS
02 CONSTANT EVOLUTION
03 END USER AUTH
04 DYNAMIC SANDBOX

list sentry errors and create linear … 3 found

SENTRY_LIST_ISSUES MATCH
List unresolved issues in a project

SENTRY_GET_EVENT MATCH
Get error event details and stack tr…

LINEAR_CREATE_ISSUE
Create a new issue in Linear

PLAN
1 Fetch all open Sentry issues
2 Classify severity in sandbox
3 Create Linear issues for P0s

WARNINGS
! Sentry project slug required
! Linear team ID must be configured

01

Search that thinks

Save your agent's context for what matters. Only give it the right tools, at the right time.

- Tools resolved by intent, not configuration
- Proposed execution plans for complex workflows
- Built-in guardrails so your agent gets it right the first time

GMAIL_SEND_EMAIL v2.1.3

to: "john <john@acme.com>"

400 Invalid recipient format: display name not allowed in "to" field

AUTO-FIX AGENT

Detected pattern: 12% of GMAIL_SEND_EMAIL calls fail on recipient format

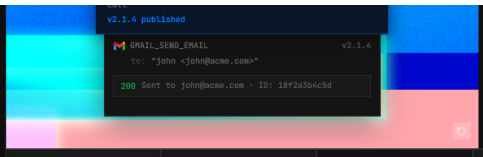
Strip display names from recipient field before API call

02

Tools that learn

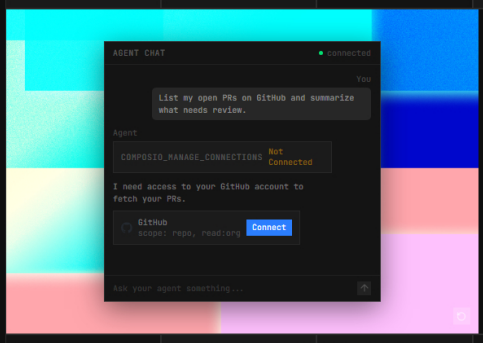
Your tools get sharper every day. Real agent behavior at scale is what makes Composio tools the most accurate available.

- Accuracy driven by millions of real-world tool calls



Account-level optimization for your usage patterns

API-stable, agent-optimized



03

Auth that works

Stop debugging auth flows. Composio handles OAuth end-to-end: on the fly, scoped to exactly what your agent needs.

- Fully managed OAuth for every connector, out of the box
- Inline auth triggered by user intent, not pre-configured
- Granular permission scoping that tightens as you go

04

Programmatic execution

Remote sandboxed environments where tools run as code and results live in a navigable filesystem.

- Compose tools as code. Multi-step workflows, sub-LLM invocations
- Large responses stored on a remote filesystem your agent can browse
- Secure, ephemeral sandboxes for every execution

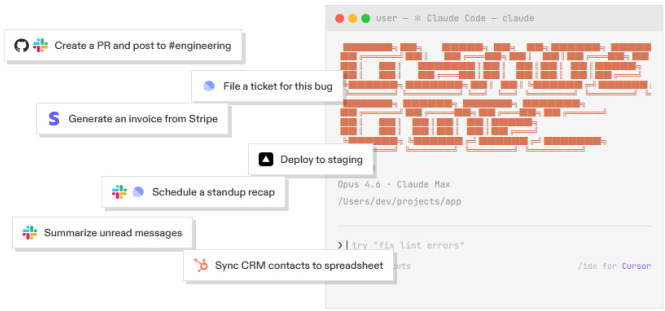
■ ZERO CODE TO FULL CONTROL

One product, every workflow

Composio FOR YOU

Turn Claude Code, Cursor, or any MCP client into an agent that executes across all your apps. Go from asking questions to doing work.

Every tool comes production-ready — authenticated, optimized, and reliable. No setup required.

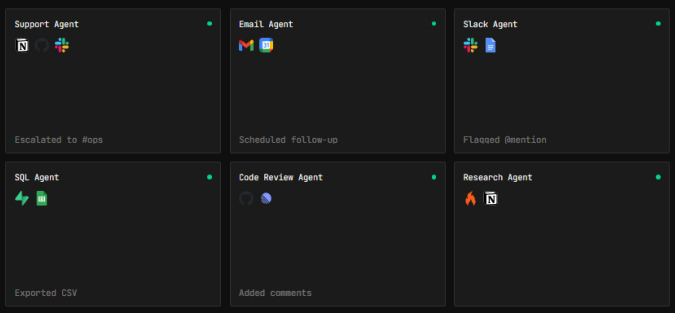


LEARN MORE

Composio PLATFORM

Your agent has the intelligence. Now let it execute. Go from chatbot to general-purpose agent in five lines of code.

```
tools = session.tools()
agent = Agent(
  name="Assistant",
  tools=tools,
)
```



LEARN MORE

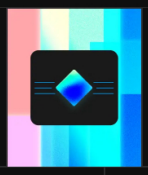
■ FOR DEVELOPERS

TRY IT OUT

Managed Auth

OAuth, API keys, token refresh, lifecycle management. We handle all of it so you never think about auth again.

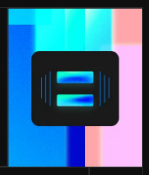
LEARN MORE



Triggers

Bidirectional communication with your apps to keep your agents informed.

LEARN MORE



Context Aware Sessions

session.py

```
session=composio.create(user_id="user_123")
tools=session.tools()
connection=session.authorize("github")
```

Every session carries full context — sandbox state, files, progress. Your agent never starts from scratch.

LEARN MORE

Model & Framework Agnostic

No lock-in. Swap models based on cost, capability, or use case. Your tools and auth carry over, zero rework.
